

Team Expertise

Dr. David Wilson is an expert in space telescope observations of white dwarfs and low-mass stars. He has led multiple HST programs observing PCEBs and has several publications using TESS data to measure orbital and/or rotation periods, including the discovery of the first young magnetic PCEB and the optical counterpart to the unique EUV variation at GD394. Dr. Wilson has also supervised multiple undergraduate researchers and will continue to do so as part of this program.

Dr. Kevin France is the PI and co-PI of the largeMUSCLES and MEATS observing programs and has extensive experience with space-based observations of stars, in particular studying their stellar activity and flares.
